

## Energy Consumption

Microlink is dedicated to maintaining low energy consumption through responsible and sustainable practices. In FY2024, the Company achieved lower energy usage per headcount, showcasing its commitment to energy efficiency.

## Water Management

As a corporate office, Microlink's water consumption is relatively low; however, the Group is keenly aware of the importance of monitoring water usage as part of its commitment to sustainability. Recognising the critical role of water as a vital resource and in alignment with Bursa Malaysia's Mandatory Common Sustainability Matters disclosure requirements, calculations on water consumption have been included in our Sustainability Statement.

## Supply Chain Management

Microlink is committed to reducing its environmental impact by actively minimizing its carbon footprint. Whenever feasible, the Group prioritizes sourcing materials, supplies, and equipment from local suppliers and from locations that have the least negative effect on the environment.

## Waste Management & Recycling

With waste management reporting becoming a mandated by Bursa Malaysia for FY2025, Microlink is promoting 'Go Green' awareness and has implemented its 3R (Reduce, Reuse, Recycle) The group has implemented waste segregation, proper weighing, and responsible disposal of general waste, glass, paper, metal, and also e-waste.

## Climate Change

Microlink is committed to climate action in line with Bursa Malaysia's requirements for Scope 1, 2, and 3 GHG emissions tracking by FY2025. The Group has started monitoring and calculating emissions from electricity consumption, office vehicles, employee commuting, and business travel, reinforcing efforts to reduce its carbon footprint and advance sustainability.
